BACKEND DEVELOPER
Nusantara Logistics - Jakarta (Hybrid)

About the role
We are hiring a Backend Developer to build and maintain the services behind our shipment tracking platform.

Requirements
- At least 3 years of professional experience developing software in Python
- Experience with SQL databases such as PostgreSQL or MySQL
- Experience designing and building REST APIs
- Bachelor's degree in Computer Science or a related field

Nice to have
- Experience with Docker
- Experience with a cloud platform such as AWS, GCP or Azure
- Experience setting up CI/CD pipelines
- Experience writing automated tests

What we offer
Competitive salary, health insurance, and a flexible hybrid schedule.
